

Karina De Vargas Pereira

Full Stack Developer

With experience in roles such as Contract Analyst, Administrative Assistant, and Integration Engineer, I've shown a strong interest and proficiency in utilizing technology across various functions. My skills in interpreting complex documentation, developing tracking mechanisms, problem-solving, and process optimization are evident. Additionally, my project management background enhances my ability to excel in the IT field. Currently acquiring full-stack skills at John Abbott, I'm ready to take on fresh challenges in the tech industry.

Montreal, Canada

Bachelor of Industrial Engineering (Project Management)

Universidade Salgado de Oliveira

02/2006 - 12/2011

Rio de Janeiro, Brazil

SKILLS

Problem solver

Self-motivated

Organized

Multitasking ability

Interpersonal

Customer service

Teamwork experience

Data analysis

ACHIEVEMENT

During the pandemic, I took the initiative to address a substantial operational bottleneck within the organization. I spearheaded the development of an automated system to efficiently gather information from the database, check verdict statuses, and automatically send tailored emails with attachments to clients each night. The objective was to relieve the workload of a few employees who were required to invest valuable time daily in navigating the database to identify judge's verdicts. Subsequently, they had to manually send approximately 150 emails per day to the clients. Through strategic planning and collaboration with the development team, I successfully implemented the solution, resulting in a significant reduction in manual workload and a marked improvement in overall operational efficiency. This initiative showcased my ability to identify critical business challenges and implement effective solutions to enhance productivity.
